PROFESSIONAL SUMMARY

Software Development Engineer with 1+ year of experience building scalable backend systems and data-driven applications. Skilled in designing RESTful APIs, implementing robust backend architectures, and working in CI/CD-driven environments. Strong problem-solving abilities with a focus on writing clean, maintainable, and production-quality code. Passionate about building efficient systems and improving performance, reliability, and user experience.

TECHNICAL SKILLS

Programming Languages

- JavaScript, TypeScript, Java
- HTML, CSS

Frameworks & Libraries

- Node.js, Express.js
- React.js, Next.js, Vue.js

Databases

- PostgreSQL, MongoDB, MySQL

Tools & Technologies

- Git, Docker, Postman, ESLint
- CI/CD Pipelines, REST APIs

PROFESSIONAL EXPERIENCE

Software Developer

Jaypee Power Ventures Ltd., Guna, MP

Mar 2025 – Present

- Contributing to software systems in a large-scale enterprise focused on power generation and distribution.

- Developed and maintained backend services with automated validation mechanisms, improving system reliability and reducing production defects.
- Implemented service-level checks and debugging workflows to minimize regression issues and ensure stable releases.
- Collaborated with cross-functional teams across the SDLC to design, integrate, and validate backend features.
- Participated in client discussions, demos, and walkthroughs to align development outcomes with business requirements.
- Improved release quality through early defect detection and structured testing approaches.

Software Developer Intern

Digital Umbrella, Remote

Jun 2024 – Jul 2024

- Developed a fully responsive e-commerce clothing website using Next.js and Tailwind CSS.
- Built dynamic UI components including categorized sections, product displays, and structured layouts.
- Integrated Swiper.js to implement interactive image sliders, enhancing user engagement.
- Designed reusable components and optimized frontend performance for smooth navigation.
- Ensured cross-device responsiveness and improved user experience across screens.

PROJECTS

Hydrology Monitoring System

Tech Stack: TypeScript, Node.js, Next.js, Tailwind CSS, RestfulAPI, MySQL

- Built a full-stack Hydrology Monitoring System using **Next.js (React)** for frontend and **Node.js/Express** for backend, supporting SCADA and AWS/EWS station monitoring, trends, and reporting.
- Implemented **secure JWT-based authentication** with role-based access control and user management APIs.
- Integrated **MySQL databases** to manage hydrology, AWS/EWS telemetry data, user records, and operational datasets.
- Developed **real-time dashboards** using ECharts/Recharts for data visualization and Leaflet for interactive map-based monitoring of risk and discharge levels.
- Designed and implemented **API proxy and rewrite mechanisms** to enable seamless communication between frontend and backend, improving deployment efficiency.
- Visit: hydrologyjpvl.cird.co.in

Hydrology Monitoring API Platform

Tech Stack: TypeScript, Node.js, Next.js, Tailwind CSS, RestfulAPI, MySQL

- Built a full-stack Hydrology Monitoring API Platform using **Next.js (React, TypeScript, Tailwind CSS)** and **Node.js/Express**.
- Implemented secure user authentication using **MySQL, bcrypt password hashing, and JWT-based protected routes**.
- Developed backend APIs for **station metadata** and **AWS/EWS telemetry**, supporting both historical database queries and live feed proxy endpoints.
- Created an **interactive dashboard** with station and date filters, pagination, refresh controls, and detailed data inspection features.
- Implemented **robust error handling** for authentication expiry, backend downtime, and upstream API failures to ensure system reliability.
- Designed a **consistent and responsive UI** with modern components, maintaining cohesive branding across login and dashboard pages.
- Visit: hydrologyapi.cird.co.in

CIRD Web Platform (Centre for Industrial Research and Development)

- Built a full-stack web platform for **CIRD** to showcase research, entities, training programs, patents, MoUs, and contact workflows.
- Developed a **modern, responsive UI** using Next.js with a reusable component architecture, including animated section transitions and dynamic content blocks.
- Designed and implemented dedicated **Hydrology modules** for EWS (Early Warning System) and AWS (Automated Weather Stations), featuring image galleries and homepage integrations.
- Created **structured multi-page navigation** for research projects, entities, team profiles, and institutional initiatives.
- Enhanced **user experience (UX)** by improving layouts, sliders, typography, and visual hierarchy for better readability and engagement.
- Integrated **frontend forms with backend APIs** for contact submissions while maintaining clean, scalable, and well-organized code.
- Visit: cird.co.in

EDUCATION

B.Tech in Computer Science Engineering

Jaypee University of Engineering and Technology, JUET Guna

July 2021 – June 2025

- GPA: **8.0 / 10**
- Class 12th: **94.2%**
- Class 10th: **86.6%**
